

Software & Hardware Package

The NControl MC (Master Control) Software & Hardware package expands on the convenience and efficiency of the other NVerzion packages by offering access to your master control panel and graphics-related tools. A traditional master control will typically include effects, transitions and other features that can enhance the on-screen presentation. The NVerzion MC package includes controls to enhance these abilities, plus it can additionally support character generators, downstream keyers, and more.

Controls you CG system to generate keys, crawls, logos and more. The configurable applications make it easy. Optional video capture hardware can also be added to be used for monitoring, quality control, thumbnail generation, etc.

Add as many channels as you like. Add monitoring and control software anywhere and expand your operation without limitation.
